

# **Seeding QDArchive - Part 2 Classification Report**

## **ISIC Rev. 5 Classification Results by Repository**

Student ID: 23158572

# Repository 1 (AUSSDA)

## a. Histogram of Primary ISIC Classes

(See following page for the vector chart.)

## b. Top 20 Primary Classes (Ranked)

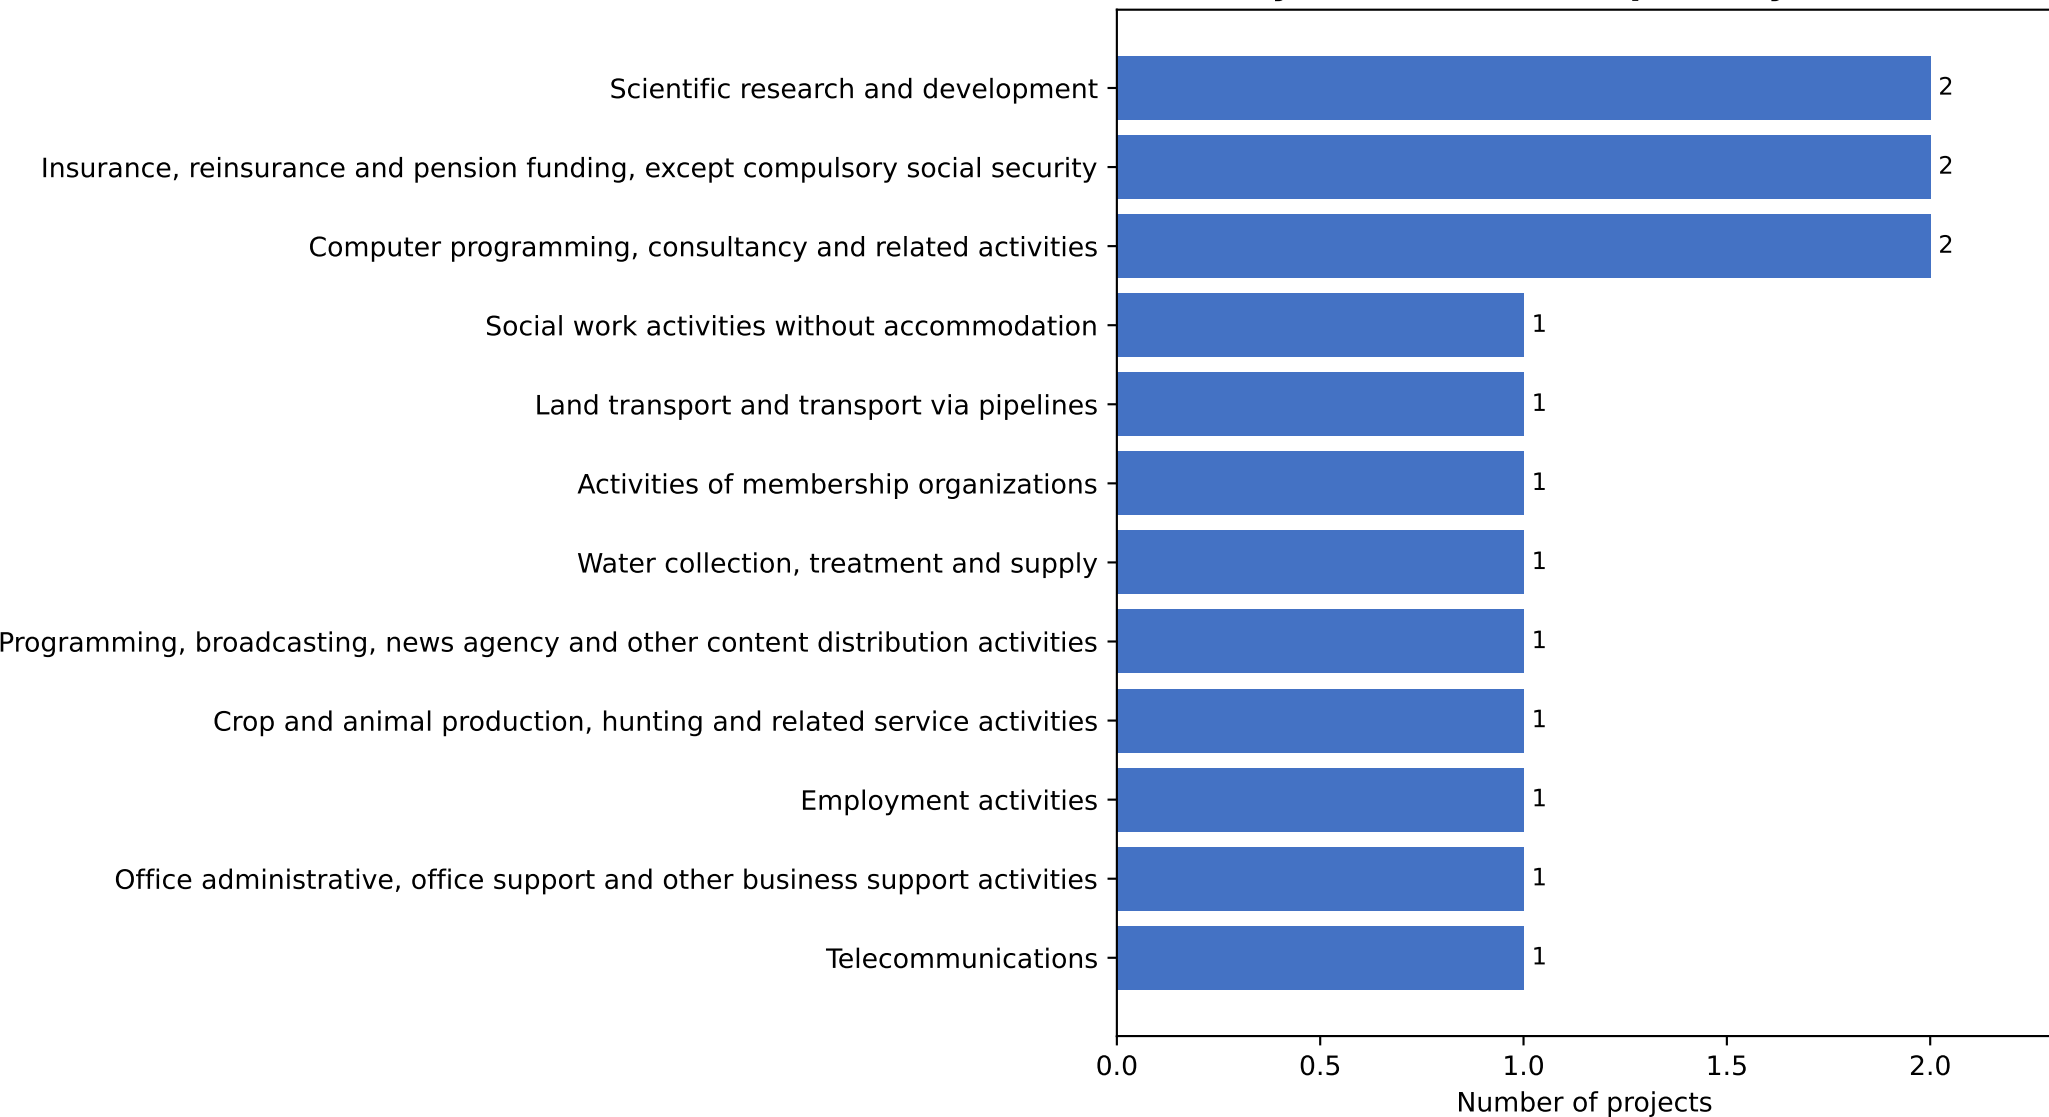

| Rank | Primary Class                                                                    | Count |
|------|----------------------------------------------------------------------------------|-------|
| 1    | Computer programming, consultancy and related activities                         | 2     |
| 2    | Insurance, reinsurance and pension funding, except compulsory social security    | 2     |
| 3    | Scientific research and development                                              | 2     |
| 4    | Telecommunications                                                               | 1     |
| 5    | Office administrative, office support and other business support activities      | 1     |
| 6    | Employment activities                                                            | 1     |
| 7    | Crop and animal production, hunting and related service activities               | 1     |
| 8    | Programming, broadcasting, news agency and other content distribution activities | 1     |
| 9    | Water collection, treatment and supply                                           | 1     |
| 10   | Activities of membership organizations                                           | 1     |
| 11   | Land transport and transport via pipelines                                       | 1     |
| 12   | Social work activities without accommodation                                     | 1     |

## c. Comments on Findings

Repository 1 (AUSSDA) contains 15 project(s) total, of which 15 were classified as QD\_PROJECT and therefore eligible for ISIC classification. The dominant primary ISIC class in this repository is "Computer programming, consultancy and related activities", accounting for 2 of 15 classified project(s).

Methodological note: classification was performed using a weighted keyword-matching (TF-IDF cosine similarity) approach combining project metadata (title, description, keywords) with extracted text from primary data files. Project-level results are aggregated via confidence-weighted voting across individually classified files. Known limitations identified during development include: (1) divisions with unusually large reference vocabularies could historically bias matches before cosine normalization was applied; (2) boilerplate phrasing repeated across ISIC division descriptions (e.g. demographic terms like "children") could cause false positives before targeted stopwords filtering; (3) administrative/documentation files (e.g. codebooks, readme files) were excluded from content classification as they describe the dataset rather than constituting primary qualitative content; and (4) projects with very large numbers of short, individually-weak files can still outvote a single strongly-confident file, as their combined vote weight accumulates.

**Primary ISIC Classes - Repository 1 (AUSSDA)**

# Repository 2

## a. Histogram of Primary ISIC Classes

(See following page for the vector chart.)

## b. Top 20 Primary Classes (Ranked)

| Rank | Primary Class                                                                 | Count |
|------|-------------------------------------------------------------------------------|-------|
| 1    | Veterinary activities                                                         | 1     |
| 2    | Manufacture of paper and paper products                                       | 1     |
| 3    | Insurance, reinsurance and pension funding, except compulsory social security | 1     |

## c. Comments on Findings

Repository 2 contains 7 project(s) total, of which 3 were classified as QD\_PROJECT and therefore eligible for ISIC classification. 4 project(s) were classified as NOT\_A\_PROJECT (typically due to failed file downloads) and were not passed through the ISIC classifier, per the assignment specification. The dominant primary ISIC class in this repository is "Veterinary activities", accounting for 1 of 3 classified project(s). Methodological note: classification was performed using a weighted keyword-matching (TF-IDF cosine similarity) approach combining project metadata (title, description, keywords) with extracted text from primary data files. Project-level results are aggregated via confidence-weighted voting across individually classified files. Known limitations identified during development include: (1) divisions with unusually large reference vocabularies could historically bias matches before cosine normalization was applied; (2) boilerplate phrasing repeated across ISIC division descriptions (e.g. demographic terms like "children") could cause false positives before targeted stopword filtering; (3) administrative/documentation files (e.g. codebooks, readme files) were excluded from content classification as they describe the dataset rather than constituting primary qualitative content; and (4) projects with very large numbers of short, individually-weak files can still outvote a single strongly-confident file, as their combined vote weight accumulates.
